

The **SETAL 200** is designed for cab trucks with a total minimum ground weight of 6500 kg and is especially suited to transporting vehicles.

The dimensions of the aluminium-alloy (SETAL 200) or galvanized steel (SETAC 200) loading platform can be altered to suit the type of truck or the customer's requirements.

The special structural design, featuring a platform that slides right out until it reaches the ground, makes it easy to load sports cars or low-slung vehicles. It can also be used for loading camper vans with a particularly long rear overhang, which are difficult to load using standard equipment. ③ ④

① A tarpaulin-covered **framework**, with sliding sides and rear hatch, can be mounted to protect the vehicle on board. An alternative is a **rigid box body**, also with rear hatch, and an optional side door.

② The 1.5t, 2t and 2.5t versions come with a rear telescopic **hydraulic fork** for the suspended towing of broken-down vehicles.
